

JavaScript Strings

Basic Programs

Data sheet 13

1. Develop a JavaScript code to reverse a given string using loops.
2. Develop a JavaScript code to count the number of vowels using loops and if statement.
3. Develop a JavaScript code to find the largest of 3 numbers using if statement and logical operators.
4. Develop a JavaScript code to print even and odd numbers from 1 – 10.
5. Develop a JavaScript code program that prints the numbers from **1 to 20**. However, for multiples of **3**, print "**Fizz**" instead of the number, for multiples of **5**, print "**Buzz**", and for numbers that are multiples of **both 3 and 5**, print "**FizzBuzz**".

Data Sheet 14

6. Declare a string and display it using innerHTML.
7. Display the string containing special characters(quotes) using backslash escape character.
8. Demonstrate the slice() with no parameters, one parameter, two parameters and negative parameters
9. Demonstrate the substr() with no parameters, one parameter, two parameters and negative parameters
10. Demonstrate the replace() and replaceAll() methods
